

SIMPLE DECISION GUIDE

Start with the problem, not the product.

The best question is not “What peptide should I take?” It is “What am I trying to fix, and what information do we need first?”

Goal

History

Labs

Safety

1 · Main goal

Pick one: weight, gut, skin, injury, energy, sleep, hormones, or focus.

2 · What else is going on?

Training, stress, sleep, medications, past injuries, and health history matter.

3 · What might fit?

Use the chart below to know what topics are worth asking about.

4 · Safety check

Confirm with a qualified provider before using anything.

Simple routing map

- ✓ **Gut problems:** ask about inflammation and gut-support topics.
- ✓ **Skin redness or irritation:** ask about skin and inflammation support.
- ✓ **Tendon/joint injury:** ask about recovery-focused options.
- ✓ **Low energy:** ask about sleep, thyroid, iron, B12, hormones, and recovery first.
- ✓ **Weight/cravings:** ask about GLP options, protein, strength training, and follow-up.
- ✓ **Poor sleep/recovery:** ask whether stress, training load, or hormones are involved.

Labs to bring if you have them

Do not worry if you do not have all of these. Bring anything recent.

- ✓ Basic bloodwork
- ✓ Blood sugar / A1c
- ✓ Cholesterol
- ✓ Thyroid
- ✓ Hormones when relevant
- ✓ Vitamin D, B12, iron/ferritin when relevant

Take the questionnaire

The questionnaire gives simple discussion topics and explains why each may be worth asking about.

3-minute questionnaire

Red flags

- ✓ Do not start anything if you do not know what it is for.
- ✓ Do not ignore side effects.
- ✓ Do not combine multiple things without guidance.
- ✓ Do not skip medical screening for medications or injections.
