

DECISION GUIDE

What should I ask about?

Use this matrix to connect your goal with the right conversation, what to bring, and what to track. It is a guide for questions — not a prescription.

Goal → discussion lane → useful questions

Pick the row that sounds most like you. If two or three rows fit, the questionnaire helps prioritize.

IF YOUR MAIN ISSUE IS...

DISCUSSION LANE

QUESTIONS WORTH ASKING

Weight, cravings, appetite

Hungry at night, stalled fat loss, food noise.

Metabolic support, GLP conversation, nutrition habits, blood sugar.

What labs matter? How do I protect muscle? What should I track weekly?

Low energy or brain fog

"I push through the day."

Sleep quality, recovery load, thyroid/iron/B12, mitochondrial support.

Is this training stress, sleep, labs, or nutrition? Would MOTS-c/SS-31 even fit?

Gut issues or skin redness

Bloating, irritation, rosacea/redness, flare-ups.

Inflammation triggers, gut/skin support, food/sleep/stress patterns.

Could KPV/GHK-Cu be a discussion topic? What triggers should I track?

Joint, tendon, or injury recovery

Shoulder, knee, elbow, tendon pain, slow healing.

Tissue repair support, rehab plan, training modifications.

What needs diagnosis first? Would BPC/TB be a provider discussion?

Sleep, recovery, hormones/libido

Waking up tired, poor recovery, low drive.

GH-axis, hormones, stress load, bedtime habits, labs.

Should we look at testosterone, thyroid, cortisol, IGF-1, sleep?

Bring labs

CBC, CMP, lipids, A1c, fasting insulin, thyroid, testosterone/hormone labs if available.

Bring meds

Current medications, supplements, injections, allergies, and previous side effects.

Bring goals

Pick your top 1-2 outcomes. "Everything" is hard to solve; priority makes the plan safer.

Safety screen before anything

These answers can change whether a topic makes sense at all.

Pregnancy/breastfeeding · cancer history · autoimmune disease · blood sugar meds · blood pressure issues · infection risk · source/sterility · provider supervision.

Need help prioritizing?

The questionnaire turns your answers into ranked discussion topics and plain-English reasons.

Best next step

Do not ask "What peptide should I take?" Ask: "What problem are we trying to solve, what data do we have, and how would we know if it worked?"

Educational only. This matrix does not diagnose, treat, prescribe, or recommend use of any therapy. Licensed provider screening is required.
