

What should I ask about?

Use this as a conversation map. The goal is not to self-prescribe—it is to match your main bottleneck with better questions, labs, and clinician guidance.

10-minute self-check

Labs first

Safety over hype

1 • Goal

Pick the one area you most want help with: weight, gut, skin, injury, energy, sleep, hormones, cognition.

2 • Context

Training load, nutrition, medications, history, labs, and symptoms change the answer.

3 • Category

Discuss categories: GLP, LIPO+, KPV, BPC/TB, GHK-Cu, GH, mitochondrial, immune.

4 • Clinician

Confirm safety, legality, sourcing, dispensing, dose, monitoring, and stop rules.

Quick routing map

- **Gut + skin:** ask about KPV / inflammation support and gut barrier basics.
- **Skin quality:** ask about GHK-Cu and collagen-supporting habits.
- **Acute tendon/joint issue:** ask whether BPC-157/TB-500 category is appropriate.
- **Energy only:** do not jump to KPV; ask about labs, sleep, thyroid, iron/B12, mitochondrial category.
- **Appetite / weight / glucose:** ask about GLP pathway and LIPO+ support.
- **Sleep + recovery:** discuss labs, training load, and GH peptide category only after screening.
- **Longevity / cognition:** ask about mitochondrial and neuropeptide categories, not quick fixes.
- **Red flags:** clinician-first, labs-first, no protocol guessing.

Safety questions to ask

- ✓ What labs should I get before starting?

- ✓ Who reviews my medications and medical history?

- ✓ What side effects mean stop immediately?

- ✓ Where is it sourced and legally dispensed?

- ✓ How do we track whether it is helping?

- ✓ What lifestyle basics should come first?

Bring these labs if you have them

CBC, CMP, fasting glucose, HbA1c, fasting insulin, lipids, ApoB, thyroid panel, testosterone/free testosterone/SHBG/estradiol when appropriate, IGF-1, hs-CRP, vitamin D, B12, ferritin/iron, and relevant history.

Take the questionnaire

The questionnaire gives you a short list of discussion topics with explanations. It is not a diagnosis or prescription.

Scan before the clinic
